QR code of Alipay payment

The watch has the feature of Alipay, which requires the phone to scan the code to verify the binding.

FREQUENTLY ASKED QUESTIONS

Why can't you wear a watch while taking a hot bath?

The temperature of the bathing water is relatively high and produces a lot of water vapor. As the vapor is in the gaseous state it's molecular radius is small hence it's easy for the water to infiltrate from the watch shell gap. When the temperature falls, the water condenses into liquid droplets which leads to an internal short circuit thus damaging the watch.

Unable to turn on and charge

If the watch does not turn on when you receive it, it may be due to damage during the transportation that leads to the protection of the battery. Charge the watch to activate it. If the watch battery is too low, please charge it for more than half an hour to activate it.

WARRANTY DESCRIPTION

1. If there are any quality problems caused by manufacturing, materials, design, etc. in normal use, the motherboard of the watch is guaranteed for repair for free within 6 months from the date of purchase.
